

Seattle Ferry Terminal Project at Colman Dock

Project Objectives

What is the purpose of the Seattle Ferry Terminal Project?

Improve the existing Seattle Ferry Terminal at Colman Dock to ensure that it will continue to provide an adequate level of service in the future in the following ways:

- Replace the aging and deteriorating dock structures, slip foundations, and transfer spans.
- Accommodate growth projected by the WSF Long-Range Strategic Plan by enhancing terminal operational and system efficiencies.
- Provide ferry passengers with safe and convenient access to multiple means of transportation.

Why is this project needed?

- Dock is constructed on damaged or deteriorated timber pilings.
- Terminal has insufficient capacity to accommodate growth in vehicles and passengers.
- Multi-modal connections are inadequate to meet current or future demand.

Implementation of other WSF objectives

- Increase revenues from sources other than fare-box.
- Enhance security to meet Homeland Security requirements.
